07 November 2013

ATG: *Bioinformatics* and *Bio Design - Services*

Note: In case of you ordering ATG:bioinformatics services for more than 500 EURO the pricing of gene syntheses starts at 19 cent/base pair depending on average to difficult sequences or complex gene arrangements.

ATG: X'omic Services and Expert Level Sequence Optimizations.

Based on years of expertise ATG offers expert level analytical X'omics bioinformatics and advanced **BioDesign-Services**.

In particular we are specialists for highly functionally designed **Gene Clusters** for many purposes for *in vivo* and *in vitro* use.

Compatibility of genetic elements as well as constructive modularity for exchange of individual building blocks in project groups can be achieved on the basis of the [ATG:FlexiTEC - standard](#) (.pdf)

This allows an improved modularized assembly addition and substitutions of genetic building block constructional elements.

The ATG - my**BioDesign** - team of professionals supports you in realizing your **molecular sequence design** or realizes contract **BioDesigns** according to your requirement specifications **on request**.

Sequence design for improving sequence compositions and arrangements basically can be constructional and/ or functional.

1. Analytical X'omic bioinformatics services
2. Constructive planning of genetic regulators
3. Molecular constructional designs
4. Functional molecular achievements
